

**Amendments to the Claims:**

The following Listing of Claims will replace all prior versions and listings of claims in the application:

1. (Canceled)
2. (Currently amended) A method of sealing an enclosable container, the method comprising:  
positioning a sealant material within the enclosable container, wherein the sealant material is present within less than the entire interior of the container and  
wherein the sealant material comprises a silicone gel and a microsphere filler distributed within the silicone gel; and  
closing the enclosable container to compress the sealant material, wherein the sealant material comprises a first portion and second portion, and wherein closure of the enclosable container compresses the first portion against the second portion.
3. (Original) The method of claim 2, wherein the first portion and the second portion each have an exposed-surface area and a side-surface area, wherein the exposed-surface area is smaller than the side-surface area, and wherein the exposed-surface area of the first portion contacts the exposed-surface area of the second portion.
4. (Previously Presented) The method of claim 2, wherein the silicone gel comprises:  
about 60.0% to about 85.0% by weight of the silicone gel of an organopolysiloxane;  
about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane; and  
about 0.5% to about 6.0% by weight of the silicone gel of a hydrosiloxane.
5. (Original) The method of claim 4, wherein the silicone gel further comprises a platinum catalyst, or a derivative thereof.

6. (Previously Presented) The method of claim 2, wherein the microsphere filler comprises an expanded thermoplastic microsphere filler.
7. (Original) The method of claim 6, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material.
8. (Previously Presented) The method of claim 2 wherein the sealant material further comprises a silica filler.
9. (Original) The method of claim 8, wherein the silica filler constitutes about 1.0% to about 20.0% by weight of the sealant material.
10. (Original) The method of claim 8, wherein the silicone gel comprises:  
about 60.0% to about 85.0% by weight of the silicone gel of an  
organopolysiloxane;  
about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane; and  
about 0.5% to about 10.0% by weight of the silicone gel of a hydrosiloxane.
11. (Original) The method of claim 10, wherein the silicone gel further comprises a platinum catalyst, or a derivative thereof.
12. (Original) The method of claim 8, wherein the microsphere filler comprises an expanded thermoplastic microsphere filler.
13. (Original) The method of claim 12, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material and the silica filler constitutes about 1.0% to about 20.0% by weight of the sealant material.

14. (Currently amended) A method of sealing an enclosable container having a component extending into the enclosable container, the method comprising:

positioning a sealant material within the enclosable container and adjacent to the component, wherein the sealant material comprises a silicone gel and a microsphere filler and wherein the sealant material is present within less than the entire interior of the container; and

closing the enclosable container to compress the sealant material around the component.

15. (Original) The method of claim 14 wherein the sealant material comprises a first portion and second portion, and wherein closure of the enclosable container compresses the first portion against the second portion around the component.

16. (Original) The method of claim 15, wherein the component comprises a cable.

17. (Original) The method of claim 14, wherein the first portion and the second portion each have an exposed-surface area and a side-surface area, wherein the exposed-surface area is smaller than the side-surface area, and wherein the exposed-surface area of the first portion contacts the exposed-surface area of the second portion.

18. (Original) The method of claim 14, wherein the silicone gel comprises:

about 60.0% to about 85.0% by weight of the silicone gel of an organopolysiloxane;

about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane; and

about 0.5% to about 10.0% by weight of the silicone gel of a hydrosiloxane.

19. (Original) The method of claim 14, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material.

20. (Original) The method of claim 14, wherein the sealant material further comprises a silica filler.

21. (Original) The method of claim 20, wherein the silicone gel comprises:  
about 60.0% to about 85.0% by weight of the silicone gel of an  
organopolysiloxane;  
about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane; and  
about 0.5% to about 10.0% by weight of the silicone gel of a hydrosiloxane.

22. (Original) The method of claim 20, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material and the silica filler constitutes about 1.0% to about 20.0% by weight of the sealant material.

23. (Canceled)

24. (Currently amended) A sealable device comprising:  
a container capable of being closed to define an interior portion;  
a sealant material disposed within the interior portion, wherein the sealant  
material comprises a silicone gel and a microsphere filler, wherein the  
sealant material is present within less than the entire interior of the  
container and wherein closure of the container is effective to compress the  
sealant material and seal the container, wherein the container comprises a  
pair of cover members adapted to fold together to close the container.

25. (Previously Presented) The sealable device of claim 24, wherein the sealant material comprises a first portion and second portion, and wherein closure of the container is effective to compress the first portion against the second portion.

26. (Original) The sealable device of claim 25, wherein the first portion and the second portion each have an exposed-surface area and a side-surface area, wherein the exposed-surface

area is smaller than the side-surface area, and wherein the exposed-surface area of the first portion contacts the exposed-surface area of the second portion.

27. (Previously Presented) The sealable device of claim 24, wherein the sealable device is adapted to receive a component that extends within the sealable device.

28. (Original) The sealable device of claim 27, wherein the sealant material provides a seal adjacent to the component.

29. (Previously Presented) The method of claim 24, wherein the silicone gel comprises:  
about 60.0% to about 85.0% by weight of the silicone gel of an  
organopolysiloxane;  
about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane; and  
about 0.5% to about 10.0% by weight of the silicone gel of a hydrosiloxane.

30. (Original) The sealable device of claim 29, wherein the sealant material further comprises a silica filler.

31. (Original) The sealable device of claim 30, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material and the silica filler constitutes about 1.0% to about 20.0% by weight of the sealant material.

32. (Previously Presented) The method of claim 2, wherein at least one of the first and second portions of the sealant material is pre-molded to create a pre-shaped piece prior to the positioning of the sealant material within the enclosable container.

33. (Currently amended) The method of claim 2, wherein the sealant material has a tack ~~no~~ greater than 2.0 ranging from 1.0 to 1.9 grams.

34. (Canceled)
